

JOB DESCRIPTION

Engineer (Design-Product Transferral)

Salary: £35,000-£40,000 depending on experience
Work permit will be sponsored if needed

St John's Innovation Centre,
Cowley Road, Cambridge CB4 0WS
Tel: +44 (0)1223 421968
Fax: +44 (0)1223 281700

Our client is a leading supplier of consumer electronic product. They are now seeking a talented engineer to join their office in Cambridge to work with design engineers and QA department to develop and document manufacturing test processes for new products and to validate that the process is fit for purpose.

Main Responsibilities

To work with design engineers and QA dept to develop and document manufacturing test processes for new products and to validate that the process is fit for purpose.

To work with engineers and QA department to test and validate the production test software.

Transfer the manufacturing test processes proposed by R&D team into the manufacturer factory so that products can be tested on the production line.

To update and maintain production test simulator and ensure all new releases are validated on it prior to delivery to the manufacturers.

To be the first point of contact with manufacturing partners when technical assistance is required and to offer first line support to them where possible.

To work with both the company's and manufacturers' procurement departments to qualify second source components.

To work with the design engineers, project managers and drawing office to maintain the company's Engineering Change system to control what is built by manufacturers.

You will be required to work with the design engineers, drawing office, project managers and QA department who are developing new hardware products and with the engineers who write the code used to test the products. It will also be necessary to work with product manufacturing team and the third party manufacturer's own test and production engineers.

Key Qualifications, Skills and Experience

Essential

Hardware design experience, preferably of consumer products
Experience of product introductions to manufacturers in low cost countries
Chinese and English speaking and writing

Desirable

Understanding of Linux system administration
Understanding of JavaScript programming
Understanding of Digital Video
